

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, June 15, 2016 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Light (104 new fires)
 New large incidents: 2
 Large fires contained: 2
 Uncontained large fires:** 7
 Area Command Teams Committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 2

**Uncontained large fires include only fires being managed under a full suppression strategy.
[Link](#) to Geographic Area daily reports.

Southwest Area (PL 3)

New fires: 14
 New large incidents: 1
 Uncontained large fires: 2
 Type 2 IMTs committed: 1

Tenderfoot, Phoenix District, BLM. IMT 2 (Sinclair). One mile south of Yarnell, AZ. Brush and tall grass. Minimal fire behavior.

* **Freeze**, San Carlos Agency, BIA. Thirty-three miles southwest of Alpine, AZ. Timber, light logging slash, and short grass. Moderate fire behavior with single tree torching, backing, and flanking. Road and area closures in effect. Last report unless significant activity occurs.

North, Cibola NF. Twenty-five miles southwest of Magdalena, NM. Timber. Moderate fire behavior with isolated torching, flanking, and backing. Road, trail and area closures in effect. Last report unless significant activity occurs.

Escondida, Socorro District, New Mexico State Forestry. Four miles north of Socorro, NM. Chaparral, brush and tall grass. No new information. Last report unless new information is received.

Predictive Services Discussion: An upper low will remain over the Northwest, while a strong ridge continues to build over the Plains and the East. A weak low near the Great Lakes will slide toward the East Coast. Scattered showers and thunderstorms will continue across the East, from Minnesota to Florida. Scattered showers and thunderstorms—and possibly snow showers at higher elevations—will develop across the northern Rockies and the Northwest. Mild conditions will continue in the West, with hot weather over the central and southern Plains and the far southern Rockies. Warm conditions will continue across the East with cool weather along the northern tier of states. In Alaska, high pressure will continue to push into the state from the West. Temperatures will continue to rise sharply, especially across the Southwest and the Interior. Isolated thunderstorms will move into the far Southwest, while showers and a few thunderstorms will develop over the North Slope.

HAZARD TREE SECURE FELLING AREA

Felling Safety Category

The following fundamental safety principles for tree felling operations have been established based on repeated lessons learned following serious accidents. To protect sawyers, swampers, and operational personnel from exposure to potential traumatic injury or death during tree felling operations, the following safety procedures should be applied to all felling activities. Fireline supervisors should continue to monitor all felling operations to ensure the following safe job procedures are consistently applied:

- A secure felling area, **MINIMUM OF TWO AND ONE HALF (2.5) TIMES THE HEIGHT OF THE MATERIAL BEING FELLED IN ALL DIRECTIONS**, needs to be established and maintained by the faller during all tree felling operations. In addition, the entire downhill side on slopes must be secured if materials can fall/role for a long, unpredictable distance.
- No one shall be permitted in the secured felling area without the authorization of the faller.
- The faller shall establish a safety zone outside the secured area, and direct EVERYONE to remain there until all felling is completed, and an "all clear" has been communicated.
- Safety zones should be established, whenever practical, in the opposite direction of the planned fall, and at a distance of at least 2.5 times the height of the trees being felled.
- The faller shall assign lookout(s). The lookout(s) shall have reliable communications with the faller, and other personnel adjacent to the secure areas.
- Competent lookouts shall be established and maintained by the faller at all major access points of roads and trails that afford access to the secured felling area.
- The faller will ensure that no hazards remain such as hang-ups, unstable logs, or other dangers before approving access or leaving the secured area
